## PROFILE

AI engineering Master's student passionate about efficient, simple solutions and first-principles reasoning.  
International experience (industrial and academic) focusing on learning and contributing.

## EDUCATION

|                                                                                                                                                                                                                                    |                                   |

| <b>Comillas Pontifical University, ETSI ICAI</b><br><i>Master's Degree in Artificial Intelligence; GPA: 9.08/10; Class Representative</i><br>– Ongoing Master's thesis: Vision-only autonomous drones with differentiable physics. | Madrid, Spain<br>2025 – 2026      |
| <b>Cornell University</b><br><i>Exchange Student - Electrical &amp; Computer Engineering</i>                                                                                                                                       | Ithaca, NY, USA<br>Jan – May 2025 |
| <b>Comillas Pontifical University, ETSI ICAI</b><br><i>BE in Mathematical Engineering and AI; GPA: 8.75/10</i>                                                                                                                     | Madrid, Spain<br>2021 – 2025      |

## EXPERIENCE

|                                                                                                                                                                                                                                                                |                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>AUDI AG</b><br><i>Geometric AI Intern</i><br>– Working on 3D structure classification and requirements engineering with agentic AI.                                                                                                                         | Ingolstadt, Germany<br>July 2026 – Nov 2026 |
| <b>Comillas Pontifical University</b><br><i>Teaching Assistant</i><br>– Contributed to deployment of a GPU-based AI cluster to support student workloads in deep learning courses.                                                                             | Madrid, Spain<br>Sep 2025 – Apr 2026        |
| <b>Azzulei Technologies</b><br><i>Computer Vision Intern</i><br>– Built a real-time multi-object tracking pipeline (YOLOv8 + Optical Flow) for automated sports camera control, achieving robust performance at 30 FPS.                                        | Madrid, Spain<br>Jun – Aug 2025             |
| <b>Imperial College London</b><br><i>Research Assistant</i><br>– Reproduced nonlinear dynamical systems using Neural ODEs and PINNs (PyTorch), validating stability and trajectory accuracy against ground-truth simulations and different initial conditions. | Remote (London, UK)<br>Jun – Aug 2024       |
| <b>Endesa</b><br><i>Energy Data Analyst Intern</i><br>– Forecasted daily Iberian ancillary service costs using MLP and regression models (MAPE < 10%).                                                                                                         | Madrid, Spain<br>Jun – Aug 2023             |

## SELECTED RESEARCH

|                                                                                                                                                                                                                                                                                                                                      |      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>TopoSIGMA: Spectral Information-Geometric Mapping Architecture</b><br>– Designed an online, training-free ROS 2 mapping system separating spectral place discovery from covariance-aware loop closure, using DINOv2 descriptors and directional node distributions.<br>– Manuscript submitted to Robotics and Autonomous Systems. | 2026 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|

## SKILLS

**Software:** Python (advanced), PyTorch, Git, Docker, CI/CD, Hugging Face, ROS 2, LangGraph, n8n  
**AI & ML:** Deep Learning, Generative AI, Agentic AI, Computer Vision, NLP, MLOps, Deep Reinforcement Learning  
**Mathematics:** Linear Algebra, Analysis, Optimization, Dynamical Systems, Statistics

## LANGUAGES

Spanish (Native) | English (Fluent) | German (Beginner)

## HONORS & AWARDS

|                                                                                                                                  |                  |
|----------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Hackathon Winner</b><br><i>Developed the winning project in the 10th Smart Industry Hackathon, featuring Kearney and CAF.</i> | 2025             |
| <b>UNIJES Social Tech Challenge Winner</b><br><i>Voice-controlled wheelchair project</i>                                         | 2024             |
| <b>Academic Excellence Scholarship</b><br><i>Top-scoring students across Community of Madrid</i>                                 | 2021, 2023, 2024 |
| <b>Baccalaureate Honorable Mention</b><br><i>2nd highest GPA in Community of Madrid</i>                                          | 2021             |
